DC++

your files, your way, no limits

DC++ : Installing / Setting up : Alternative hublists?

Question:

Answer:
One of the benefits of using DC++ is the ability to switch the hublist that is downloaded. To start out, Hublist.org is a great site with a large list of hublists. To use another hublist, open up File -> Settings. Click on the Download tab and then replace the public hub list URL at the bottom.

Alternatively, here is the most popular hublists in use today:

- http://www.hublist.org/PublicHubList.config.bz2
This list uses www.hublist.org database

- http://www.imperialnet.org/index.php?page=dc
Information on how to register. You need to register before you can download this public hublist.

- http://www.1stleg.com/PublicHubList.config.bz2
1stleg's BZipped Hublist

- http://wza.digitalbrains.com/DC/hublist.bz2
Sedulus's Hublist

- http://dreamland.gotdns.org/PublicHubList.config.bz2
Dreamland's Primary Hublist

- http://www.neo-modus.com/PublicHubList.config
Neo-Modus's original hublist

- http://dcgui.berlios.de/PublicHubList.config.bz

If none of these work in DC++, try pasting a link into your browser. If a file does download, then you have some sort of firewall blocking DC++ specifically. If nothing downloads, then a firewall is blocking all your internet traffic to that site.
