

DC++ : Using DC++ : 'No users to download from' - I just added one!

Question:

Answer:

When I search for a thing, its comes up that there are people with slots free, I try to download and then it says "No users to download from" Despite the fact that I have searched the second before (and searched again afterwards and they are still there), they have slots free and I can't download. So what is the problem?

Look in the errors column in the queue for more information. The file might be missing or corrupt for instance. Most often it is cause from a Rollback Inconsistency.
